Publications

Assistance with setting up your publication, clarifying objectives, addressing communication planning, design, “break of book”, layout and best options will get your publication up to speed sooner, with less grief, and lower overall costs. Ongoing assistance is available in planning and managing your publication.

You are welcome to draw on PageMaster for professional journalism, copywriting and photography for your publication project. If your project has stalled before it gets started you may want to reconsider assistance in this critical area.

Putting together the look and feel of your publication can be done as part of the full project, or a template can be created for in-house use by your staff.

There is no need to worry about inputting content from a hard copy. Optical Character Recognition (OCR) can recognize most text documents for use in the digital environment. Our high-end flat bed scanner (Artex 1100) features true 42-bit colour bit depth with 1000 x 2000 optical resolution which produces extremely sharp and detailed images. From photographs to data entry, we can digitize all the elements of your publication preparing them for assembly in the digital work flow.

PageMaster has the systems and experience to efficiently produce your publication to professional standards.
